CVWO Write-up

Having had some experiences in designing websites with particular focus on UI/UX design, I would like to give myself a challenge this time to further broaden my knowledge and sharpen my skills. Thus, I feel that participating in CVWO is the perfect place to do so, as I get to give back to the community at the same time.

Throughout my design journey, the smooth animation on the iPhone has always impressed me. Long pressing controls which causes the context box to pop out have provided me an immersive experience. Therefore, I want to design an app that can not only replicate this experience for users, but also ease their workload by simplifying certain everyday processes.

Here is what I have, TodoLink. It provides a clean and simple interface which allows user to create, edit and delete their task by using keyboard shortcuts. This features have provided higher accessibility to my app as they can modify their task list without using mouse. Not only that, users can also share their task list to anyone by clicking the button to copy the link that associated with their task list.
